

// ProceduralTerrain

```
frequency *= Lacunarity;
}

if (UseFalloffMap) {
    float falloff_00 = Mathf.PerlinNoise(x, z) - 0.5f;
    float falloff_01 = Mathf.PerlinNoise(x, z + 1f) - 0.5f;
    float falloff_10 = Mathf.PerlinNoise(x + 1f, z) - 0.5f;
    float falloff_11 = Mathf.PerlinNoise(x + 1f, z + 1f) - 0.5f;

    height00 -= Mathf.Clamp01(height00 - falloff_00) * 0.5f;
    height01 -= Mathf.Clamp01(height01 - falloff_01) * 0.5f;
    height10 -= Mathf.Clamp01(height10 - falloff_10) * 0.5f;
    height11 -= Mathf.Clamp01(height11 - falloff_11) * 0.5f;
}

int x0 = x * CellSize;
```

Changing these values will move the falloff floor up and down

As the value approaches 0 the floor moves up along the Y axis

// ProceduralTerrain

Changing these values adjusts the harshness, or crispness, of the falloff

```
frequency *= Lacunarity;
}

if (UseFalloffMap) {
    float falloff_00 = Mathf.PerlinNoise(x, z) - 0.5f;
    float falloff_01 = Mathf.PerlinNoise(x, z + 1f) - 0.5f;
    float falloff_10 = Mathf.PerlinNoise(x + 1f, z) - 0.5f;
    float falloff_11 = Mathf.PerlinNoise(x + 1f, z + 1f) - 0.5f;

    height00 -= Mathf.Clamp01(height00 - falloff_00) * 0.5f;
    height01 -= Mathf.Clamp01(height01 - falloff_01) * 0.5f;
    height10 -= Mathf.Clamp01(height10 - falloff_10) * 0.5f;
    height11 -= Mathf.Clamp01(height11 - falloff_11) * 0.5f;
}

int x0 = x * CellSize;
```
