```
// ProceduralTerrainEditor
                                   So our terrain generation requirements are now:
                                   Only generate terrain if
                                   1. The Generate button is clicked
                                   or
                                   2a. A property has changed in the inspector
serializedObject.Update();
                                   and
EditorGUI.BeginChangeCheck();
                                   2b. Auto Update is on
EditorGUILayout.PropertyField(serializedObject.FindProperty("AutoUpdate"));
if (GUILayout.Button("Generate") || procedural_terrain.AutoUpdate)
if (GUILayout.Button("Generate")
  EditorGUI.EndChangeCheck() && procedural_terrain.AutoUpdate
  procedural_terrain.GenerateTerrain();
```

Playtime(UNITY, TERRAIN)

```
  Open(PROJECT, UNITY);
  Click("Hierarchy Tab", Plane);
  Play(SliderValues & ToggleValues);
```
