// ProceduralTerrain

```
float height11 = 0f;
float amplitude = 1f;
float frequency = 1f;
for (int i = Octaves; i > 0; i--) {
  float octave_x0 = x / Scale * frequency;
  float octave_z0 = z / Scale * frequency;
  float octave_x1 = (x + 1f) / Scale * frequency;
  float octave_z1 = (z + 1f) / Scale * frequency;
  height00 += Mathf.PerlinNoise(octave_x0, octave_z0) * amplitude;
  height01 += Mathf.PerlinNoise(octave_x0, octave_z1) * amplitude;
  height10 += Mathf.PerlinNoise(octave_x1, octave_z0) * amplitude;
  height11 += Mathf.PerlinNoise(octave_x1, octave_z1) * amplitude;
  amplitude *= Persistance;
                                The idea is that each successive octave adds
 frequency *= Lacunarity;
                                more detailed noise, with less strength, than
                                the octave before it to the height output
int x0 = x * CellSize;
```
