// ProceduralTerrain

```
float height11 = 0f;
float amplitude = 1f;
float frequency = 1f;
for (int i = Octaves; i > 0; i--) {
  float octave_x0 = x / Scale * frequency;
  float octave_z0 = z / Scale * frequency;
  float octave_x1 = (x + 1f) / Scale * frequency;
  float octave_z1 = (z + 1f) / Scale * frequency;
  height00 += Mathf.PerlinNoise(octave_x0, octave_z0) * amplitude;
  height01 += Mathf.PerlinNoise(octave_x0, octave_z1) *
                                                          amplitude;
  height10 += Mathf.PerlinNoise(octave_x1, octave_z0) *
                                                          amplitude;
  height11 += Mathf.PerlinNoise(octave_x1, octave_z1) * amplitude;
  amplitude *= Persistance;
                                       Multiplying our peril noise value by our
  frequency *= Lacunarity;
                                       amplitude gives us the total amount of
                                        height we want to add for this octave
int x0 = x * CellSize;
```

// ProceduralTerrain

int x0 = x * CellSize;

```
float height11 = 0f;
float amplitude = 1f;
float frequency = 1f;
for (int i = Octaves; i > 0; i--) {
  float octave_x0 = x / Scale * frequency;
  float octave_z0 = z / Scale * frequency;
  float octave_x1 = (x + 1f) / Scale * frequency;
  float octave_z1 = (z + 1f) / Scale * frequency;
  height00 += Mathf.PerlinNoise(octave_x0, octave_z0) * [amplitude];
  height01 += Mathf.PerlinNoise(octave_x0, octave_z1) * amplitude;
  height10 += Mathf.PerlinNoise(octave_x1, octave_z0) * amplitude;
  height11 += Mathf.PerlinNoise(octave_x1, octave_z1) * amplitude;
                                 With a Persistence value of 0.5f, this line
  amplitude *= Persistance;
                                 ensures each successive octave has half the
  frequency *= Lacunarity;
                                 amplitude, or strength, of the octave before it
```
